

Reckitt's purpose is to protect, heal and nurture in the relentless pursuit of a cleaner and healthier world. It's the basis of our business strategy, while our sustainability agenda frames our ambition to make the greatest positive impact we can on society and the planet.

Reckitt is actively addressing climate change, packaging and our impact on the environment and communities where we work. We are pleased to work with partners and GSCF on these issues, recognising that collaboration is both essential and will generate great impact in tackling challenges faced by society as a whole.

Using less packaging and plastics:

Reckitt is using less packaging and plastic across its portfolio, reducing total virgin plastic use by **50%** by **2030**. We are designing packaging, and avoiding certain types of and unnecessary plastic to support our goal of making **100%** of packaging recyclable or reusable by **2025** to support a circular economy. We're innovating to make packaging more sustainable while maintaining the highest standards of consumer safety and quality.

Pharmaceuticals in the environment

As part of our commitment on water, Reckitt is **reducing our water footprint** while managing waste to **reduce effluent emissions and safeguard the local environments we are part of**. We encourage **safe use and disposal** of all pharmaceutical products (including take back schemes where they exist).

Reducing Our Carbon Footprint:

Reckitt is reducing our operational carbon footprint (scope 1, 2) by **65%** and our product footprint by **50%** (scope 3) by **2030**, in line with our science based targets and supporting our ambition to be net carbon neutral by **2040**.

We are continuing to develop our activity across each of these areas and we will develop our position accordingly. These are aligned with our wider **Sustainability Ambitions** where we work with partners and a wide range of stakeholders to create the greatest positive impact.
